Jyske Bank Group
Pillar III report

The third quarter of 2026

Contents

1. Introduction and purpose 3
2. Regulatory framework and basis of disclosure 5
3. Management statement and governance 5
4. Overview of capital and risk profile 6
5. Overview of total risk exposure and risk weighted assets 8
6. Appendix: Quantitative disclosure templates 9

1. Introduction and purpose

This report constitutes the Jyske Bank Group's Pillar 3 disclosure for the third quarter of 2026 and has been prepared in accordance with the regulatory requirements. The report covers Jyske Bank Group and provides market participants with a consolidated, transparent and consistent view of the Group's capital position, risk profile and liquidity situation.

Jyske Bank Group determines its capital requirement through the Internal Adequacy Assessment Process (ICAAP) and makes quarterly reassessments and updates. Each update is reviewed and approved by the Group Supervisory Board to ensure that the capital position remains adequate and aligned with the Group's risk appetite and regulatory obligations.

Additionally, the document should be viewed as a continuation of the risk and capital profile described in "Risk and Capital Management 2025", with no material changes to the Group's risk appetite, governance framework or capital management principles. The "Risk and Capital Management 2025" report contains further details on:

- The organisational structure and processes for risk management in Jyske Bank Group
- Methods and specifications of the solvency need divided by main risk types
- The scenarios and methods used for capital planning and stress testing
- A description of the process and methods used for ESG-related risk

Jyske Bank Group's capital management is anchored in the regulatory framework defined by the Capital Requirements Regulation (CRR) and Capital Requirements Directive (CRD), and is structured around the three-pillar approach:

- **Pillar I** outlines methodologies for calculating minimum capital requirements across credit, market, and operational risks, with a baseline requirement of 8% of risk exposure amount (REA).
- **Pillar II** encompasses the Internal Capital Adequacy Assessment Process (ICAAP), which includes risk identification, solvency need assessment, and stress testing. It also forms the basis for the Supervisory Review and Evaluation Process (SREP) dialogue with supervisory authorities.
- **Pillar III** concerns transparency and disclosure of risk and capital metrics.

Under Pillar I, Jyske Bank applies standard approaches for market and operational risks, while credit risk is assessed using a hybrid approach applying the standard methodology as well as internally developed IRB-models. Credit risk remains the dominant risk category within the Group's capital requirement.

Pillar II capital requirements are tailored to reflect the Group's actual risk profile and designed to capture risks not fully addressed under Pillar I. These additions are structured into distinct categories within the ICAAP framework.

Credit Risk
Within credit risk, additional capital is held to cover concentration risks - both at the individual counterparty and industry level - reflecting the elevated risks that may arise from large or correlated positions. The Group also applies capital buffers to exposures flagged by internal early warning indicators and to clients assessed as financially vulnerable, where their repayment capacity may be uncertain. Furthermore, risks associated with interest-only lending and potential payment shocks on variable-rate loans are considered and addressed through supplementary capital requirements. Counterparty credit risk and settlement risk, particularly in relation to derivative transactions, are also covered by dedicated capital reserves. In cases where internal rating-based (IRB) models are under remediation or do not fully comply with regulatory requirements, specific reservations are applied to ensure an adequate capitalisation.

Market Risk
For market risk, the Group holds capital to cover exposures to interest rate risk, including credit spread movements, as well as foreign exchange, equity and commodity risks. These risks are actively monitored and assessed using scenario analyses and stress testing, supporting the Group's resilience under adverse market conditions.

Liquidity Risk
Liquidity risk is addressed through capital add-ons that reflect refinancing risk and sensitivity to changes in credit ratings. These measures support the Group's strategic focus on maintaining funding stability and preserving market confidence. The liquidity buffer is actively managed and structured to ensure sufficient coverage under both normal and stressed conditions.

Operational Risk
Pillar II capital add-ons pertaining to operational risk reflect risks arising from ongoing litigation, data governance, IT infrastructure, and compliance with the General Data Protection Regulation (GDPR). These risks are identified through structured risk assessments, historical incident analysis, and scenario-based evaluations.

Other Risks
Beyond the core risk categories, the ICAAP framework also encompasses other risk types such as strategic risk, model risk, and reputational risk. These are continuously assessed to ensure a comprehensive understanding of the Group's overall risk profile. At present, however, no specific Pillar II capital add-ons have been allocated to these categories. This is because the risks are either deemed immaterial in terms of capital impact under current conditions or are considered sufficiently mitigated through internal processes, governance structures, and contingency planning.

Additionally, as part of the Group's ICAAP framework, stress testing is conducted regularly to assess the impact of adverse macroeconomic scenarios. The stress testing setup includes scenario-based and sensitivity analyses, ensuring that the Group maintains sufficient capital buffers to support its strategic objectives and regulatory compliance.

The disclosure is prepared in accordance with the proportionality principle and reflects the Group's size, complexity and business model. Quantitative templates are presented in the appendix, while the main body of the report focuses on explanatory and interpretative narrative, including developments since the previous disclosure.

2. Regulatory framework and basis of disclosure

This Pillar 3 disclosure has been prepared in accordance with:

- CRR (Regulation (EU) No 575/2013), Part Eight (Articles 431–451)
- CRR3, applicable from 1 January 2025, including the introduction of the output floor, revised rules for operational risk and adjusted credit risk methodologies
- EBA Implementing Technical Standards (ITS) on Pillar 3 disclosures

There remains some uncertainty regarding the interpretation of certain CRR/CRD rules, and several binding Technical Standards have yet to be finalised. Also, the amendments for market risk (FRTB) have been delayed by the European Commission to January 2027. Accordingly, the Group will continue to update its assumptions and models in accordance with ongoing regulatory developments and evolving industry consensus.

The report is published on a quarterly basis in accordance with Articles 433 and 433a CRR. The information disclosed in this pillar III report has not been audited.

3. Management statement and governance

Risk management, capital management and disclosure processes are embedded in the Group's governance framework and are supported by internal processes, systems and controls as well as internal validation. Hence, the governance follows the same as for the Group's internal risk reporting. See Risk and Capital Management 2025 for a full overview of the Risk Management governance.

The Board of Directors and Executive Management have reviewed this Pillar 3 report and confirmed that:

- the Group's risk management systems are appropriate in relation to the business model and risk profile
- the disclosures have been prepared in accordance with applicable regulatory requirements
- the disclosures have been made in accordance with the Group's formal policies and internal control framework

The disclosure was reviewed according to internal governance processes, and signed on its behalf by:

Jacob Gyntelberg
Chief Risk Officer

4. Overview of capital and risk profile

Pursuant to Article 447 CRR, the Group discloses key prudential metrics providing an overview of its capital and risk profile. The Group continues to maintain a strong capital position, with capital and liquidity ratios comfortably above regulatory minimum requirements. Developments in this quarter are influenced by stable earnings and sound portfolio developments.

Key metrics, including the CET1 ratio, total capital ratio, leverage ratio, LCR and NSFR, are presented in the table below and shown in full in Table EU KM1 in the appendix.

Capital Buffers
The Group's solvency need consists of the sum of Pillar I and Pillar II capital requirements. Furthermore, capital buffers constitute an additional capital requirement. Currently, the Group holds a SIFI-buffer (O-SII) of 1.5%, a capital conservation buffer (CCB) of 2.5%, a countercyclical capital buffer (CCyB) of 2.5%, and a sector specific systemic risk buffer (SyRB) of 0.8%.

Group Capital Requirement
The Group's solvency and total capital requirements are delineated below by principal risk categories. The individual solvency need of the Group makes up 10.9% of the risk exposure amounts (REA). Moreover, the total capital requirement encompasses the regulatory buffers, which currently constitute 7.3% of REA. Hence, the total solvency need of the Group including the buffer requirement amounts to 18.1% of REA. The binding capital buffer amounts to 2.2% of REA.

Table 1: Selected key metrics from EU KM1

Capital requirement	Jyske Bank Group	
	DKKm	Pct.
Credit risk	20.894	8.2%
Market risk	3.847	1.5%
Operational risk	2.837	1.1%
Liquidity risk	39	0.0%
Solvency need	27.618	10.9%
Solvency need + combined buffer requirement	46.082	18.1%
Available own funds and capital ratios		
Common Equity Tier 1 (CET1)	39.855	15.7%
Tier 1 capital	44.744	17.6%
Total Capital Base	53.043	20.9%
Capital buffers		
Common Equity Tier 1 capital buffer	5.857	2.3%
Tier 1 capital buffer	5.567	2.2%
Capital buffer	6.961	2.7%
Leverage and liquidity ratios (%)		
Leverage ratio		5.5%
Liquidity coverage ratio		262,5%
Net Stable Funding Ratio		157,0%

The leverage ratio is monitored as a non-risk-based backstop and reflects the Group's balance sheet structure, including the different leverage characteristics of banking and mortgage activities. At the end of the quarter, the Group's leverage ratio showed a solid buffer above the minimum regulatory requirement of 3% and continues to reflect a conservative balance sheet structure with no excessive leverage risk.

Jyske Bank continuously monitors liquidity risk through regular monitoring, reporting and governance of the Liquidity Coverage Ratio (LCR) and Net Stable Funding Ratio (NSFR), ensuring compliance with internal limits and regulatory requirements. Both LCR and NSFR are comfortably above the minimum regulatory requirements, reflecting a strong liquidity buffer and stable funding profile.

5. Overview of total risk exposure and risk weighted assets

In accordance with Article 438(d) CRR, the Group discloses information on total risk exposure amounts. The total risk exposure amount (TREA) is dominated by credit risk but is also affected by market risk and operational risk. In the table below, CCR, CVA and settlement risk are included in the credit risk values.

Changes in TREA compared with the previous quarter are primarily attributable to:

- Higher credit risk exposure amounts, mainly reflecting growth in corporate, institutional and Retail IRB exposures, partly offset by increased use of guarantees and lower risk-weighted exposure amounts for exposures secured by residential property.
- Lower market risk exposure amounts due to reduced overall interest rate risk, partly offset by higher CVA risk related to foreign exchange exposures.

Table 2: Selected extracts from EU OV1

Risk-weighted exposure amounts *(DKKm)*	Jyske Bank Group	
	2026 Q3	*2026 Q2*
Credit risk etc.[1]	219.594	217.453
Of which Standardised approach	27.076	27.069
Of which A-IRB-approach	43.462	43.273
Of which F-IRB approach	111.674	110.324
Market risk	7.753	8.289
Operational risk	26.705	26.705
Total	**254.052**	**252.448**

[1]Includes counterparty credit risk, credit valuation adjustments risk, settlement risk and securitisation exposures

6. Appendix: Quantitative disclosure templates

The appendix contains the standardised EBA disclosure templates required under the EBA ITS on Pillar 3 disclosures. The following templates are based on the consolidated statement. The quantitative disclosures can also be accessed via the EBA Data Hub (link), where the data is made available in a standardised and comparable format.

	Jyske Bank Group

EU LIQB - on qualitative information on LCR, which complements template EU LIQ1
Jyske Bank Group

(a)	Explanations on the main drivers of LCR results and the evolution of the contribution of inputs to the LCR's calculation over time	LCR changes are mainly driven by fluctuations in own issuances, deposits and loans.
(b)	Explanations on the changes in the LCR over time	See section 'Liquidity risk legislation and supervisory diamond' in 'Risk and Capital Management 2025'
(c)	Explanations on the actual concentration of funding sources	See section 'Group funding structure' in 'Risk and Capital Management 2025'
(d)	High-level description of the composition of the institution`s liquidity buffer.	See section 'The Group's liquidity buffer' in 'Risk and Capital Management 2025'
(e)	Derivative exposures and potential collateral calls	The impact of an adverse market scenario is calculated using the Historical Look Back Approach (HLBA).
(f)	Currency mismatch in the LCR	Jyske Bank Group complies with the requirements set forth by the Danish FSA to have a minimum LCR of 100% for Euro.
(g)	Other items in the LCR calculation that are not captured in the LCR disclosure template but that the institution considers relevant for its liquidity profile	None
